

Istruzioni per testare il classificatore attraverso un file esterno

Per applicare correttamente il modello esportato è necessario installare la versione 0.23.2 di *scikit-learn*. In caso contrario compariranno degli warning e non è possibile garantire la consistenza del modello.

A screenshot of a Windows PowerShell terminal window. The title bar at the top reads "Windows PowerShell" and includes standard window controls (minimize, maximize, close). The command prompt shows the user's current directory as "C:\Users\Marco\Desktop" and the command being executed is "python performance_breast_classifier.py --test 'test_breast.csv'". The rest of the terminal area is black and empty, indicating the command has been executed but no output is visible yet.

```
PS C:\Users\Marco\Desktop> python performance_breast_classifier.py --test 'test_breast.csv'
```

In caso di malfunzionamento utilizzare il notebook:

[“performance_breast_classifier_notebook.ipynb”](#)
